

ABB MEASUREMENT & ANALYTICS | DATA SHEET

System components for sample gas conditioning

Measurement made easy System components for sample gas conditioning

Careful treatment of the sample gas ensures perfect measurement results in the gas analyzer

- In most cases, the sample gas taken from the process cannot be processed by the gas analyzer without further treatment. Excessive dust content, temperature and dew point as well as excessively high or low pressure and, last but not least, interfering components in the sample gas can impair the operability of the gas analyzer and falsify the measurement result.
- System components such as the sample gas cooler, pumps and filters ensure that regardless of the process and local conditions, the gas inlet conditions of the connected gas analyzers are met and perfect measurement results are obtained.

System components for sample gas conditioning

- SCC-C Sample gas cooler
- SCC-F Sample gas feed unit
- SCC-S Sample gas feed unit
- Diaphragm pump 4N
- SCC-K Converter
- SCC-U Utility unit
- Membrane filter
- CGKW Condensate monitor

- Acid filter
- Disposable filter
- Flow meters, flow monitors
- ER-144A/Ex Switching unit
- KFA Isolated switch amplifier
- Cylinder pressure reducers
- Multi-way test gas cock

3

SCC-C Sample gas cooler

- Compressor sample gas cooler
- Constant outlet dew point
- 1 or 2 gas paths
- Heat exchanger made from glass, PVDF or stainless steel, exchangeable without tools
- Corrosion-resistant gas lines
- High pressure version up to 1 MPa (10 bar)
- Temperature display
- Suitable for ambient temperatures up to 50 °C
- Compact surface-mounting housing (width ½ 19 inches, 6 height units)
- System solutions in connection with the SCC-F sample gas feed unit
- Suitable for use in measuring equipment conforming with 17th BlmSchV (German Federal Immission Protection Law)
- Explosion-proof versions with ATEX and CSA certifications

Sample gas inlet conditions

Sample gas pressure

Heat exchanger	Sample gas pressure p _{abs}	
(HE) material	w/o peristaltic pump	with peristaltic pump
Glass	50 to 200 kPa (0.5 to 2.0 bar)	50 to 150 kPa (0.5 to 1.5 bar)
PVDF	50 to 250 kPa (0.5 to 2.5 bar)	50 to 150 kPa (0.5 to 1.5 bar)
Stainless steel	0.05 to 1 MPa (0.5 to 10 bar)	50 to 150 kPa (0.5 to 1.5 bar)

Sample gas flow rate

1 × 250 l/h (HE250) or 1 × 125 l/h (HE125) or 2 × 125 l/h, relating to sample gas pressure p_{abs} = 100 kPa (1 bar) and 25 °C

Sample gas inlet temperature

Max. 140 °C

Sample gas inlet dew point

Max. 70 °C, max. 60 °C for HE250 at sample gas flow rate > 200 l/h

Operating data

Sample gas outlet temperature Factory-set to +3 °C

Dew point stability

 ± 0.3 °C per 10 °C temperature change, ± 0.3 °C per 10 l/h change in flow rate

Refrigeration capacity 40 W at +10 to 50 °C

Warm-up time Approx. 15 min

Pressure drop in heat exchanger

Approx. 1 hPa (1 mbar), approx. 4 to 8 hPa (4 to 8 mbar) for HE125

Dead volume in heat exchanger

Heat exchanger material	Dead volume in heat exchanger					
	HE125	HE250				
Glass	40 ml	140 ml				
PVDF	25 ml	100 ml				
Stainless steel	30 ml	100 ml				

Gas tightness

5 × 10⁻⁶ hPa l/s

Display and status signal

Temperature display Digital display in °C

Status signal

< 0 °C and > 8 °C, 2 potential-free two-way switches, switching capacity 250 V AC, 2 A

Construction

Design

Surface-mounting housing 1/2 19 inch, 6 height units

Mounting

On the wall with mounting brackets supplied or in a 19-inch cabinet/rack

Housing material and color Sheet steel; light gray (RAL 7035), basalt gray (RAL 7012)

Degree of protection of housing IP20 to EN 60529

Dimensions

Materials of gas-conducting parts

PVDF, PTFE, PP, glass, FPM, stainless steel (high pressure version)

Gas connections

Heat exchanger

Heat exchanger material	Sample gas inlets & outlets	Condensate outlet
Glass	Screwed pipe or hose connection GL18 ¹⁾	Pipe nipple GL25
PVDF	6 mm tube	G¾ female thread
Stainless steel	G¼ female thread	G¾ female thread

1) 2 GL coupling nuts per heat exchanger with insert 6 × 4 × 1 mm threads for a hose or pipe are supplied with the unit

Peristaltic pump (option)

Condensate outlet PVDF, DN 4/6

Electrical connections

Power supply

Cable, 3 m long, permanently fixed

Status signal Cable, 3 m long, permanently fixed

Safety

Testing to EN 61010-1

Protective class

.

Overvoltage category / degree of contamination II / 2 $\,$

Protective separation

Electrical isolation of the 115/230 V AC power supply from the other current circuits by means of reinforced or double insulation. Functional extra-low voltages (PELV) on the low voltage side

Electromagnetic compatibility

Emitted interference

Testing to EN 61000 Part 6-3, Class B

Immunity to interference Testing to EN 61000 Part 6-2, Industrial environment

Mechanical capabilities

Testing to EN 60068-2-27 and EN 60068-2-6

Transport

Shock: 30 g / 18 ms / 18 shocksVibration: $1 \text{ g} / \pm 0.15 \text{ mm} / 5 \text{ to } 150 \text{ Hz}$, $3 \times 5 \text{ cycles}$

Operation Vibration: 1 g / ±0.07 mm / 5 to 55 Hz, 3 × 2 cycles

Ambient conditions

Ambient temperature Operation: +5 to 45 °C, Storage and transport: -25 to +60 °C

Relative humidity

 \leq 75 % annual average, occasional and slight condensation permitted, \leq 95 % on 30 days per year

Power supply

Input voltage

230 V AC or 115 V AC -15 to +15 %, 50 to 60 Hz

Power consumption Max. 200 VA

Starting current 2.5 A at 230 V AC

Options

Metering device

In gas path 1 by means of a peristaltic pump installed in the SCC-C sample gas cooler or in the SCC-F sample gas feed unit, feed tank as accessory, for small SO₂ measuring ranges (< 1000 mg/m^3) or to avoid acid aerosols

Peristaltic pumps

1 or 2 peristaltic pumps for discharging condensate (flow rate approx. 300 ml/h, 5 rpm) and metering (flow rate approx. 15 ml/h), pressure resistance p_{abs} = 50 to 150 kPa (0.5 to 1.5 bar), peristaltic tube service life approx. 5 months, power consumption 3.5 VA, weight approx. 0.6 kg

Certifications

IECEE CB Scheme – Safety

The SCC-C sample gas cooler is certified to the 'IEC system for mutual recognition of test certificates for electrical equipment'. It complies with standard IEC 61010-1 (3rd Edition). Certificate No. SI-4210

CSA – Safety

The SCC-C sample gas cooler is certified for use in general purpose environment, evidenced by full compliance with standards CAN/CSA-C22.2 No. 61010-1-12 und UL Std. No. 61010-1 (3rd Edition).

Certificate No. 70006295

ATEX – Explosion protection

The SCC-C sample gas cooler in the category 3G explosion-proof version is suitable for use in zone 2 hazardous areas. Testing to EN 60079-0:2012 + A11:2013 and EN 60079-15:2010. Designation: 🔂 II 3G Ex nA nC IIC T4 Gc Type examination certificate No. BVS 16 ATEX E 056 X

CSA – Explosion protection

The SCC-C sample gas cooler is certified to

- Class 2258 02 Process Control Equipment For Hazardous Locations – Certified to Canadian Standards and
- Class 2258 82 Process Control Equipment For Hazardous Locations – Certified to U.S. Standards

Class 1, Div. 2, Groups A, B, C and D, Temperature code T4, maximum ambient temperature +50 $^\circ C.$

SCC-F Sample gas feed unit

- Complete sample gas conditioning in connection with the SCC-C sample gas cooler
- 2 independent gas paths
- Corrosion resistant, metal-free gas lines
- Compact surface-mounting housing (width 1/2 19 inches, 6 height units)
- Service-friendly due to easy access to the modules

Sample gas inlet conditions

The SCC-F sample gas feed unit is designed for continuous dosed feeding of sample gas.

The SCC-F sample gas feed unit must not be used:

- for feeding mixtures of gas/air or oxygen that are capable of ignition during normal service.
- for feeding flammable gas, which can ignition-capable mixture. or
- in a potentially explosive atmosphere or hazardous areas.

Sample gas pressure

p_{abs} = 70 to 105 kPa (0.7 to 1.05 bar)

Sample gas flow rate

Gas paths 1 and 2 max. 100 l/h, bypass max. 200 l/h

Sample gas inlet temperature

+10 to 50 °C

Sample gas inlet dew point

The dew point of the sample gas must be at least 5 °C lower than the lowest ambient temperature in the whole sample gas path. Otherwise a sample gas cooler or a condensate trap is required.

Operating data

Warm-up time

Approx. 10 minutes (plus warm-up time of sample gas cooler)

Dead volume

Approx. 10 cm³ (plus dead volume of heat exchanger)

Gas tightness 5×10^{-6} hPa l/s

Flow rate display and adjustment

Rotameter 10 to 100 l/h with needle valve (metal-free)

Feed performance standard

- A Inlet: negative pressure, outlet: atmospheric pressure
- B Inlet: acc. to chart, outlet: positive pressure

Status signals

Status signals

Flow rate and condensate monitors, one potential-free two-way switch each, switching capacity: Version without I/O card: 250 V AC, 2 A per sample gas path, version with I/O card option: 30 V, 1 A

9

Construction

Design

Surface-mounting housing 1/2 19 inch, 6 height units

Mounting

On a mounting plate with the mounting brackets supplied or in a 19 inch cabinet/rack

Housing material and color Sheet steel; light gray (RAL 7035), basalt gray (RAL 7012)

Degree of protection of housing IP20 to EN 60529

Dimensions See page 10

Weight Max. 15 kg

Material of gas-conducting parts

PVDF, PTFE, PVC, EPDM, FPM, PP-EPDM elastomer

Gas connections

PVDF coupling for tube of 6 × 4 × 1 mm

Electrical connections

Power supply

Screw clamp terminals for stranded or solid wire max. 2.5 mm²

Status signals

Screw clamp terminals for stranded or solid wire max. 1.5 mm²

Safety

Testing to EN 61010-1

Protective class

L

Overvoltage category/degree of contamination II/2

Protective separation

Electrical isolation of the 115/230 V AC power supply from the other current circuits by means of reinforced or double insulation. Functional extra-low voltages (PELV) on the low voltage side

Electromagnetic compatibility

Tested to EN 61326-1

Emitted interference

Class B

Immunity to interference Industrial environment

Mechanical capabilities

Testing to EN 60068-2-27 and EN 60068-2-6

Transport Shock: 30 g / 18 ms / 18 shocks

Vibration: 1 g / ±0.15 mm / 5 to 150 Hz, 3 \times 5 cycles

Operation

Vibration: 1 g / \pm 0.07 mm / 5 to 55 Hz, 3 × 2 cycles

Ambient conditions

Installation site

The SCC-F sample gas feed unit is only intended for installation indoors. The max. altitude of the installation site may not exceed 2000 m above sea level.

Ambient temperature

Operation: +5 to 45 °C, Storage and transport: -25 to +60 °C

Relative humidity

 \leq 75 % annual average, occasional and slight condensation permitted, \leq 90 % on 30 days/year

Power supply

Input voltage

230 V AC or 115 V AC, 50 Hz or 60 Hz

Power consumption during operation Max. 185 VA

- - - - -

Options

Metering unit

By means of peristaltic pump, flow rate 15 ml/h, feed tank as accessory, for small SO_2 measuring ranges (< 1000 mg/m³) or to avoid acid aerosols

I/O card

To connect the SCC-F sample gas feed unit and the SCC-C sample gas cooler to the AO2000 Series continuous gas analyzers via the system bus

- Display and monitoring of the cooler temperature
- Monitoring and processing of status signals of the SCC-F sample gas feed unit (condensate, flow rate)
- Control of up to three external solenoid valves for zero gas connection, 230 V, 50 Hz
- Digital inputs for monitoring condensate collecting bottles and reagent reservoirs

Certifications

IECEE CB Scheme – Safety

The SCC-F sample gas feed unit with I/O card option is certified to the 'IEC system for mutual recognition of test certificates for electrical equipment'. It complies with standard IEC 61010-1 (3rd Edition). Certificate No. DE1-55251

CSA – Safety

The SCC-F sample gas feed unit with I/O card option is certified for use in general purpose environment, evidenced by full compliance with standards CAN/CSA-C22.2 No. 61010-1-12 and UL Std. No. 61010-1 (3rd Edition). Certificate No. 70010607

SCC-S Sample gas feed unit

- Process-proven modules
 - Diaphragm pump for feed-in of the gas
 - Membrane filter/condensate monitor
 - Flow monitor with needle valve
 - Ball valve/solenoid valves for feed-in of the test gas
 - Peltier cooler with condensate pump
- Ideal for use in simple processes (non-corrosive sample gas)
- Simple installation and connection
- Housing designed for 19-inch rack mounting and wall mounting (4 height units, IP20)
- Attractively priced system solution in combination with gas analyzers of the EasyLine series

Sample gas inlet conditions

Sample gas pressure

 $p_{abs} = 70 \text{ to } 105 \text{ kPa} (0.7 \text{ to } 1.05 \text{ bar})$

Sample gas flow rate

Gas path: 7 to 70 l/h, Bypass: 15 to 150 l/h (not in version with Peltier cooler)

Sample gas inlet temperature +10 to 50 °C

Sample gas inlet dew point

Version with Peltier cooler: max. +50 °C (at max. +25 °C ambient temperature)

Version without Peltier cooler: The dew point of the sample gas must be at least 5 $^\circ$ C lower than the lowest ambient temperature in the whole sample gas path.

Operating data

Warm-up time

Version with Peltier cooler: approx. 10 minutes Version without Peltier cooler: ready for immediate use

Gas tightness

5 × 10⁻⁶ hPa l/s

Flow rate display and adjustment Rotameter with needle valve (metal-free)

Outlet dew point (versions with Peltier cooler) +3 $^\circ\mathrm{C}$

Condensate discharge (versions with Peltier cooler)

Peristaltic pump: feed performance approx. 300 ml/h at 5 rpm, pressure resistance p_{abs} = 50 to 150 kPa (0.5 to 1.5 bar), peristaltic tube material TPE, peristaltic tube service life approx. 5 months, power consumption 3.5 VA, weight approx. 0.6 kg

A Inlet: negative pressure, outlet: atmospheric pressure

B Inlet: acc. to diagram, outlet: positive pressure

Display and status signals

Temperature control and display (versions with Peltier cooler)

Temperature controller with digital display of the cooler temperature in °C; set point factory-set at +3 °C, can be altered on site.

Status signals

Collective status signal of the condensate, flow and cooler monitoring: potential-free changeover contact, contact load 24 V DC/AC, 1 A. Status display of the condensate monitoring: Red LED on the front panel

Applications: Peltier cooler for combustion gases

Application 1

 $SO_2\,0$ to 75 mg/m³, NO 0 to 100 mg/m³, measurement with Uras26

Construction

Desian

19-inch housing (4 height units) for rack and wall mounting

Mounting

Rack mounting on mounting rails, wall mounting with pre-assembled mounting brackets on the housing. The gas and electrical connections are located on the back of the housing for rack mounting and on the top of the housing for wall mounting. They can be altered on site. Comply with the distances from the wall during installation: left and right-hand side panels at least 35 mm, back panel at least 25 mm. A distance of at least 1 height unit from devices which develop heat is required for the version with Peltier cooler. Max. inclination of the instrument 5°.

Housing material and color

Sheet steel, galvanized, basalt gray (RAL 7012), front panel light gray (RAL 7035)

Degree of protection of housing

IP20 to EN 60529

Dimensions See page 16

Weight

Approx. 17 kg

Material of gas-conducting parts

Glass, glass fiber, EPDM, ETFE, FPM, PP, PPH, PVC, PVDF, TPE

Gas connections

Sample gas inlet PVDF angled screw fitting for tube 6 × 4 × 1 mm

Test gas inlets PPH coupling for tube 6 × 4 × 1 mm

Gas outlets PPH coupling for tube 6 × 4 × 1 mm

Electrical connections

Power supply

Connector for non-heating apparatus (cable with grounding plug, length 2 m, supplied)

Status signal (standard) and external solenoid valves (option) 8-pin plug receptacle (see connection diagram, mating plug supplied)

Connection diagram

The connection diagram shows the internal wiring of the sample gas feed unit.

The integrated power supply can also be used for the supply of external solenoid valves: Terminal 7 = 0 V, terminal 8 = +24 V, maximum capacity 30 VA at 24 V DC.

Safety

Testing to EN 61010-1

Protective class

Overvoltage category/degree of contamination II/2

Protective separation

Electrical isolation of the 115/230 V AC power supply from the other current circuits by means of reinforced or double insulation. Functional extra-low voltages (PELV) on the low voltage side

Electromagnetic compatibility

Tested to EN 61326-1

Emitted interference

Power supply

Input voltage 230 V AC \pm 10 %, 50 Hz or 115 V AC \pm 10 %, 60 Hz

Power consumption during operation 230 V AC, 50 Hz, max. 300 VA

Protection of the instrument

Fine-wire fuse, 3.15 A, slow-blow

Options

Internal power supply/power stage

For the activation of max. 3 internal or external solenoid valves, operating voltage 24 V DC, capacity max. 30 VA, 3 A fine-wire fuse

Solenoid valves for internal test gas infeed

3/2-way solenoid valve: 1 ea., for switching over sample gas/test gas, valve type is pivoted armature valve, material PVDF and FPM, power supply 24 V DC, activation via a digital output of the gas analyzer or a PLC.

2/2-way solenoid valve: max. 2 ea., for test gas infeed, valve type is rocker valve with separating diaphragm, material PPH and FPM, power supply 24 V DC, activation via a digital output of the gas analyzer or a PLC.

Condensate discharge for external cooler

Peristaltic pump: flow rate approx. 300 ml/h at 5 rpm, pressure resistance p_{abs} = 50 to 150 kPa (0.5 to 1.5 bar), peristaltic tube material TPE, peristaltic tube service life approx. 5 months, power consumption 3.5 VA, weight approx. 0.6 kg

Certifications

Dimensions (in mm)

- 1 Sample gas inlet
- 2 Sample gas outlet, bypass outlet and test gas inlets via ball valve or solenoid valve
- 3 Power supply connection and electrical connection for status signal, solenoid valve control and 24 V DC
- 4 Ball valve for infeed of test gas
- 5 Flow monitor with needle valve (option: second flow monitor for bypass)
- 6 Peristaltic pump (option: second peristaltic pump for external cooler)
- 7 Membrane filter or condensate monitor
- 8 LED indicator for condensate alarm, red
- 9 Pump switch
- 10 Temperature controller for cooler

Note: The illustration shows options. The scope and features of the ordered design may differ.

Diaphragm pump 4N

• Feed in of the sample gas

 Compact unit with degree of protection of housing IP20 or IP54

Operating data

Inlet pressure p_{abs} = 70 to 105 kPa (0.7 to 1.5 bar)

Flow rate Max. 250 l/h at atmospheric pressure

Inlet temperature +5 to 50 °C

Inlet dew point Below room temperature

Tightness

Pressure drop 0.1 hPa/min

Feed performance

A Inlet: negative pressure, outlet: atmospheric pressureB Inlet: according diagram, outlet: positive pressure

Construction

Design

Surface-mounting case for wall attachment, motor axis horizon-tal

Housing material and color Plastic, RAL 7035

Degree of protection of housing IP20 or IP54 to EN 60529

Class of protection

Dimensions See page 19

I

Weight Approx. 1.8 kg

Materials of gas-conducting parts

Valve plate, diaphragm: EPDM (ethylene-propylene); pump body: PP (polypropylene); hose: FPM; nozzles: ETFE (ethylene-tetrafluorethylene)

Gas connections

Electrical connections

Terminals via cable connection M20

Mechanical capabilities

Testing to DIN EN 60068-2-27 and DIN EN 60068-2-6

Transport Shock: 30 g / 18 ms / 18 shocks Vibration: 2 g / ±0.15 mm / 5 to 150 Hz, 3 × 5 cycles

Operation Vibration: 2 g / ±0.07 mm / 4 to 7 Hz, 3 × 2 cycles

Ambient conditions

Ambient temperature Operation: IP54 +5 to 40 °C, IP20 +5 to 50 °C Storage and transport: -25 to +65 °C

Relative humidity

 \leq 90 % annual average, condensation permitted

Climatic class 3K4 to EN 60721-3-3

Power supply

AC voltage 230 V ± 10 %, 50 Hz or 60 Hz 115 V ± 10 %, 50 Hz or 60 Hz

Power consumption

Approx. 50 VA

SCC-K Converter

NO₂/NO converter

- Catalytic converter based on carbon-molybdenum
- High catalyst service life
- Catalyst cartridge can be changed without tools
- Option: Version with heated sample gas inlet
- Application: Reduction of NO_2 to NO in emission monitoring

Thermal converter with quartz-glass reaction tube

- Thermal converter for operation temperatures up to 680°C
- No consumable parts
- PVDF fittings
- Applications:
 - Conversion of certain carbon, sulfur and halogen compounds into measurable components
 - Removal of interfering components from the sample gas without the other gas components being affected

Operating data of NO₂/NO converter

Sample gas flow rate Max. 150 l/h

Temperature range

Depending on sample gas flow rate: 30 l/h: 320 °C; 60 l/h: 320 °C; 90 l/h: 340 °C, 150 l/h: 360 °C

Effectivity

 \ge 95 % with new catalyst

Service life of catalyst

The service life of the catalyst depends on its operating temperature as well as the flow rate and the NO_2 and O_2 content of the sample gas. It is > 6 months for 320 °C, 30 l/h, 10 ppm NO_2 and 5 Vol.-% O_2 .

Sample gas pressure

 $p_{abs} \le 200 \text{ kPa}$ (2 bar)

Pressure drop ≤ 2 kPa (20 mbar) at 90 l/h

Warm-up time Approx. 30 min

90% time T₉₀ ≤ 10 s at 60 l/h

Operating data of thermal converter

Sample gas flow rate Normally 60 l/h, max. 120 l/h

Sample gas inlet temperature Max. 80 °C (dew point dry)

Temperature range Max. 680 °C at 120 l/h sample gas flow rate

Effectivity ≥ 99 %

Sample gas pressure p_{abs} ≤ 120 kPa (1.2 bar)

Pressure drop ≤ 0.5 kPa (5 mbar)

Warm-up time Approx. 60 min

90-% time T₉₀ ≤ 10 s at 60 l/h

Applications of thermal converter

Pulp and paper industry

TRS measurement, oxidation of sulfur-organic and non-organic compounds. Analyzer: Uras26. Operating temperature: 650 °C. Sample gas flow rate: 60 l/h.

Chlorine plants

Conversion of $\rm H_2$ to HCl using Cl_2. Analyzer: Caldos25 (flowing reference gas). Operating temperature: 450 °C or 500 °C. Sample gas flow rate: 60 l/h or 120 l/h.

Chlorinated hydrocarbons (CHC), PVC plants

Oxidation of chlorine components. Analyzer: upon request, measurement of HCl. Operating temperature: 650 °C. Sample gas flow rate: 60 l/h.

Status signal

Status signal for temperature deviation 1 NO potential-free contact, capacity 24 V DC, 1 A

Construction

Design

19 inch slide-in housing, 3 height units

Mounting

In 19 inch cabinet/rack or with mounting brackets (accessories) on the wall, distance above min. 1 height unit

Housing material and color

Sheet steel; light gray (RAL 7035), basalt gray (RAL 7012)

Degree of protection of housing IP20 to EN 60529

Dimensions See page 23

Weight Approx. 8 to 9 kg

Materials of gas-conducting parts

NO₂/NO converter: Stainless steel 1.4571 (SAE 316Ti), PVDF, PTFE, FPM, PFA. Thermal converter: PTFE, PVDF, PFA, quartz glass.

Gas connections

Sample gas inlet and outlet unheated G¹/₄ female thread (PVDF in thermal converter)

Heated sample gas inlet (optional in NO₂/NO converter) Swagelok® screwed connection for pipes with 6 mm inner diameter

Electrical connections

Power supply

Connector for non-heating apparatus, cable with grounding plug, length 2 $\rm m$

Status signal

9 pin Sub-D female connector with counter-plug

Safety

Testing to EN 61010-1

Protective class

I

Overvoltage category / degree of contamination II / 2 $\,$

Protective separation

Electrical isolation of the 120/240 V AC power supply from the other current circuits by means of reinforced or double insulation. Functional extra-low voltages (PELV) on the low voltage side

Electromagnetic compatibility

Tested to EN 61326-1

Emitted interference

Class B

Immunity to interference Industrial environment

Ambient conditions

Ambient temperature Operation: +10 to 50 °C, Storage and transport: -25 to +65 °C

Relative humidity

 \leq 75 % annual mean, occasional and slight condensation permitted

Power supply

Input voltage 240 V AC, -15/+10 %, 48 to 62 Hz or 120 V AC, -10/+10 %, 48 to 62 Hz

Power consumption 240 V AC: 575 VA; 120 V AC: max. 560 VA

Certifications

IECEE CB Scheme – Safety

The SCC-K converter is certified to the 'IEC system for mutual recognition of test certificates for electrical equipment'. It complies with standard IEC 61010-1 (3rd Edition) and IEC 61010-2-010 (3rd Edition).

Certificate No. SI-6661

CSA – Safety

The SCC-K NO $_2$ /NO converter is certified for use in general purpose environment, evidenced by full compliance with standards CAN/CSA-C22.2 No. 61010-1-04 and UL Std. No 61010-1 (2nd Edition).

Certificate No. 2298365

SCC-U Utility unit

- Power supply and control unit for use in small extractive gas analyzer systems
- Power distribution for gas analyzers, gas sampling devices, heated sample probe filter units, heated sample gas lines
- Temperature controllers for heated sample gas line and heated sample probe filter (optional)
- Solenoid valves for control of automatic calibration with test gases (optional)

Power distribution

Single-phase power supply output for:

- ABB Continuous gas analyzers
- SCC Gas sampling devices
- SCC-K NO2/NO converter
- PFE2 or PFE3 Heated filter unit
- TBL01-S Heated sample gas line
- CGWB13 Heated sample gas line

Calibration control

Solenoid valves for switching up to three test gases according to following configurations (see 'Pneumatic diagrams' on page 26):

- Calibration with calibration cells:
- 1 solenoid valve for switching ambient air
- Calibration with test gas feeding at sample gas cooler:
 3 + 1 solenoid valves for switching up to three test gases
- Calibration with test gases feeding at gas sampling probe:
- 3 + 1 solenoid valves for switching up to three test gases and ambient air

Note

EL3000 Analyzers to be configured via APC with the second Digital I/O board for valve control according to the wiring diagrams. For valve activation and the implementation of alarms ECT software is required. Take care of the correct operation when carrying out the engineering.

AO2000 Analyzers to be configured via APC with the necessary Digital I/O´s in according to the wiring diagrams. For valve activation and the implementation of alarms FB-programming is required. Take care of the correct operation when carrying out the engineering.

Sample gas inlet conditions

The sample gas must be non-corrosive, non-flammable and non-toxic. The utility unit has one gas path.

Sample gas pressure p_{abs} = 70 to 105 kPa (0.7 to 1.05 bar)

Test gas pressure p_{abs} ≤ 200 kPa (2 bar)

Sample gas flow rate 70 l/h with SCC-S 100 l/h with SCC-C and SCC-F

Sample gas inlet temperature 10 to 50 °C

Note

The relevant data in the gas analyzer data sheets must be considered as well for the sample handling components.

Power supply

Input voltage

230 V AC ±10%, 50 Hz or 115 V AC ±10%, 60 Hz

Note

The unit is prepared to support both voltage ranges. Take care to have the connected components in the correct voltage range available, when carrying out the engineering.

Power consumption

230 V AC 50 Hz: max. 3500 VA, max. 16 A. 115 V AC 60 Hz: max. 1750 VA, max. 16 A.

Internal fuse protection: 10 A (sample gas line), 6 A (filter unit), 10A (internal 24 V supply, external devices).

External fuse protection by customer: 16 A.

Display and status signals

Temperature control and display (optional)

Temperature controllers with digital display for heated filter unit PFE2 or PFE3 and heated sample gas line TBL01-S

Note

The temperature controllers are pre-configured for PFE2 or PFE3 and TBL01-S. In case the CGWB13 or third party devices are used the configuration needs to be adapted to the settings of the components which comes to application. The settings of the temperature controllers can be modified by following the instructions of the operator manual, in case the adaption to other heaters is required.

Take care of the maximum power consumption and the correct operation when carrying out the engineering.

Status signals

- Status signal transmission between the analyzer and the SCC-U via terminal block –X32.
- Failure messages via the connected analyzer¹⁾
 - ¹⁾ Signal wiring needs to meet the hard wired linkage of signals inside the SCC-U.

Construction

Design

19-inch housing (3 height units)

Mounting

Rack mounting on mounting rails. The gas and electrical con-nections are located on the rear side of the housing. Consider the distances from the wall during installation: Left- and right-hand side panels at least 35 mm, rear panel at least 200 mm. A distance of at least 1 height unit from devices which develop heat is required.

Housing material and color

Aluminum, front panel light gray (RAL 7035)

Degree of protection of housing IP20 to EN 60529

Dimensions

See page 27 and the Technical drawings SCC-U on page 41

Weight

Approx. 15 kg

Materials of gas-conducting parts

PVDF, PTFE, PA, EPDM, ETFE, FPM, PP, PPH, PVC, TPE

Gas connections

Sample gas inlet 1 PVDF coupling for tube 6 x 4 x 1 mm

Test gas inlet

3 PVDF couplings for tube 6 x 4 x 1 mm

Gas outlet 2 PVDF couplings for tube 6 x 4 x 1 mm

Electrical connections

See also the Wiring diagram on page 45.

Power supply input

Male connectors (socket plug) for non-heating apparatus.

Power supply output

Female connectors (socket plugs) for non-heating apparatus for:

- 4 socket plugs are available
- ABB Continuous gas analyzers
- SCC Gas sampling devices
- 1 socket plug² (-X20) fix assigned for: Heated sample probe filter unit PFE2 or PFE3
- 1 socket plug² (-X21) fix assigned for:
 - Heated sample gas line
 - ²⁾ The power supply output is available only if the unit is configured with temperature controllers.

Note

For the maximum power consumption please refer for the chapter power supply and the wiring diagrams which are part of the drawing package.

Cables

- Cables with mating plugs, length 2 m, to connect the external devices are supplied per order.
- Type: H05VV-F 3 x 1mm², CE, VDE, 300V
- Mating plugs are supplied only for TBL01-S and PFE2/PFE3.

Digital input and output signals

15 pin Sub-D female connector (-X32). Cable with length 2 m, for connection to the gas analyzer is supplied.

Engineering information

The following engineering information shall be taken into consideration when designing a small extractive gas analyzer system with the SCC-U utility unit.

Arrangement of the devices in a rack or cabinet (examples)

SCC-K	SCC-U
NO₂/NO converter	Utility unit
SCC-U	EL3020
Utility unit	Gas analyzer
EL3020	SCC-S
Gas analyzer	Sample gas feed unit
SCC-S Sample gas feed unit	

When installing the devices into a rack or cabinet, provide a distance of at least 1 height unit between the devices.

An SCC-K $\ensuremath{\mathsf{NO}_2}\xspace/\ensuremath{\mathsf{NO}_2}\xspace$ device.

An SCC-F sample gas feed unit and an SCC-C sample gas cooler can be installed side-by-side instead of the SCC-S sample gas feed unit.

Engineering hint

Take care of sufficient heat dissipation of your system. Avoid heat buildups inside the cabinet.

Laying the sample gas line

Lay the heated sample gas line inclined downwards. Avoid water pockets when laying the sample gas line.

Ambient temperature

Consider the ambient temperature at the installation location of the analyzer system. A fan with inlet and outlet filter is required in any case. Installation of a cooling unit may be necessary depending on the prevailing ambient temperature. Avoid radiated heat and harsh conditions (e.g. dust).

Multi-way test gas cock

Technical data

Flow rate Approx. 1000 l/h at 50 hPa pressure difference and 20 °C

Gas pressure p_{abs} ≤ 17.6 MPa (176 bar)

Leakage rate ≤ 5 × 10⁻³ hPa l/s

Materials of gas-conducting parts PTFE, stainless steel SS 316, suitable for pure oxygen

Weight Approx. 0.8 kg

Mounting

Wall mounting (with accessories) or panel mounting

Gas connections 1/8 NPT and screw fitting for pipes with 6 mm outer diameter

Ambient temperature +10 to 65 °C

45 63 /M6

Montagebohrung Bore holes

	Catalog No.
Test gas cock stainless steel for wall mounting	23177-5-8308581

Membrane filter

Application

The membrane filter is used in gas conditioning systems of analyzer equipment for fine filtering of dust particles $\geq 1 \ \mu m$, in order to protect the analysis instruments from contamination in the event of disturbances in the sample gas conditioning chain.

Technical data

Flow rate Max. 300 l/h (air)

Gas pressure

PVC: p_{abs} max. 150 kPa (1.5 bar), stainless steel: p_{abs} max. 200 kPa (2 bar)

Gas temperature

PVC: max. 55 °C, stainless steel: max. 100 °C

Retention rate 100 % for particles $\ge 1 \, \mu m$

Pressure drop

2.5 to 20 hPa (mbar) at a flow rate of 30 to 250 l/h (air)

Materials of gas-conducting parts

Case: PVC or stainless steel 1.4571 (SAE 316Ti), gas connections: PTFE, round cord rings: FPM, filter membrane: glass fiber

Filter surface Approx. 24 cm²

Dead volume

Approx. 15 cm³

Weight

PVC: approx. 0.6 kg, stainless steel: approx. 1.4 kg

Mounting

Panel and wall mounting (with mounting bracket)

Gas connections

G¼ female thread or nozzles for hose internal diameter 4 mm

Scope of delivery

Membrane filter, mounting bracket, 2 nozzles, 2 round cord rings

Ordering information

	Catalog No.

Condensate monitor, PVC	23158-5-8018440
Condensate monitor, stainless steel	23157-5-8018039

Dimensions (in mm)

Membrane filter, PVC version

Membrane filter, stainless steel version

CGKW Condensate monitor

Application

The condensate monitor CGKW is used to indicate moisture (condensate) or any other electrically-conducting liquid which penetrates into the sample gas line to the gas analyzer. At the same time, the condensate monitor is a membrane filter and it therefore satisfies the double function of fine filtering the sample gas as well as of signaling moisture. The filter membrane holds back the penetrated concentrate for a short while. An independent condensate barrier (see application examples) can be constructed with the condensate monitor as sensor element and the switching unit ER-144A/Ex (see page 37).

Technical data

Flow rate Max. 300 l/h (air)

Gas pressure

PVC: p_{abs} max. 150 kPa (1.5 bar). stainless steel: pabs max. 200 kPa (2 bar)

Gas temperature

Max. 55 °C

Retention rate

100 % for particles $\geq 1 \, \mu m$

Pressure drop

2.5 to 20 hPa (mbar) at a flow rate of 30 to 250 l/h (air)

Materials of gas-conducting parts

Case: PVC or stainless steel 1.4571 (SAE 316Ti), gas connections: PTFE, electrodes: stainless steel 1.4305 (SAE 303), round cord rings: FPM, filter membrane: glass fiber

Filter surface

Approx. 24 cm²

Dead volume Approx. 15 cm³

Dimensions

As for membrane filter (see page 31)

Weight

PVC: approx. 0.7 kg, stainless steel: approx. 1.5 kg

Mounting

Panel and wall mounting (with mounting bracket)

Gas connections

G¼ female thread or nozzles for hose inside diameter 4 mm

Electrical connections

Two-core cable, approx. 1 m, for connecting to the switching unit ER-144A/Ex (see page 37)

Mounting orientation

Safety nose at top, electrode below

Scope of delivery

Condensate monitor, mounting bracket, 2 nozzles, 2 round cord rings, 25 filter membranes, operating manual

Ordering information

See page 31

Explosion protection (only with stainless steel case)

The condensate monitor is a device without voltage source. If the condensate monitor is being operated in the intrinsically-safe control circuit of the switching unit ER-144A/Ex, the apparatus is permitted in hazardous areas of Zones 1 and 2 up to a gas and ambient temperature of 55 °C without restriction of the explosion groups and temperature classes.

Application examples

The process gas is present at zero pressure or with negative pressure

Sample gas feeding by pump. Condensate barrier by switching off the pump. Condensate monitor and analyzer must be arranged above the sample gas conditioning chain.

The process gas is present at zero pressure or with weak positive pressure

Sample gas feeding by pump. Condensate barrier by switching off the pump and switching over a 3/2-way solenoid valve. Condensate monitor and analyzer can be arranged as you wish.

The process gas is present with positive pressure

Sample gas feeding by positive pressure. Condensate barrier by switching over a 3/2-way solenoid valve. Condensate monitor and analyzer can be arranged as you wish.

Acid filter

Application and description

The acid filter is used in the gas conditioning system. Its purpose is to collect the sulfuric acid aerosols entrapped in the sample gas. The acid filter may always be required where the SO_3 content in the sample gas is greater than 1 mg/m³ or the SO_2 content is greater than 1000 mg/m³ – for example in flue gas from heavy-oil or hard coal firings.

The filter element is made up of borosilicate fibers. An influencing and 'hang-up' of the measuring component in the sample gas is not detectable with this material.

Technical data

Flow rate Max. 250 l/h (air)

Gas pressure

p_{abs} = 50 to 200 kPa (0.5 to 2 bar)

Sample gas temperature Max. 150 °C

Sample gas dew point Max. 70 °C

Retention rate 99.99 % for particles $\ge 0.1 \, \mu m$

Pressure drop

10 hPa at 250 l/h, 50 hPa at 250 l/h

Dead time Approx. 20 s

Materials of gas-conducting parts

Connection cap: PVDF; vessel: glass; filter element: borosilicate glass micro fiber

Dead volume

Approx. 130 ml

Weight

Approx. 0.6 kg

Mounting

Wall mounting with mounting bracket, mounting orientation vertical

Gas connections

Male fitting (PVDF) for 4/6/1 mm, drainage connection GL14 with terminal fitting 4/6/1 mm (PVDF)

Ambient temperature

+5 to 50 °C

Service life

Change element if there is contamination and perceptibly higher pressure drop

Scope of delivery

Filter vessel with filter element, two male fittings, drainage connection GL14, mounting bracket, mounting and replacement instructions

Dimensions (in mm)

	Catalog No.
Acid filter	23045-5-8018419

Disposable filter

Application and description

The disposable filter is used in the gas conditioning system. It is mounted in the sample gas line upstream of the gas analyzer.

The disposable filter consists of a micro fiber filter pipe which is welded into a plastic case.

Technical data

Flow rate Max. 250 l/h (air)

Gas pressure p_{abs} ≤ 200 kPa (2 bar)

Sample gas temperature +5 to 50 °C

Retention rate 99.99 % for particles $\ge 0.1 \, \mu m$

Pressure drop Approx. 2 hPa at 60 l/h

Dead time Approx. 3 s at 60 l/h

Materials of gas-conducting parts Case: PA, Filter element: borosilicate glass micro fiber

Case volume 11.5 cm³

Weight Approx. 0.1 kg

Mounting Mounting orientation preferably vertical

Gas connections

Two pipe nipples, outside diameter 6.3 mm

Ambient temperature +5 to 50 °C

Service life

Change filter if there is condensate accumulation (acid), and in any case every 6 months

Scope of delivery

Disposable filter, mounting and replacement instructions

Dimensions (in mm)

	Catalog No.
Disposable filter	23044-5-8018418

Flow meters, flow monitors

- Flow measurement using float-type flow meters
- Replaceable measuring tube
- Integral needle valve
- Flow monitor with inductive contact

Flow meter 7 to 70 l/h

Measuring range

7 to 70 l/h nitrogen at 20 °C and 1013 hPa (mbar) The following flow rates are obtained with other gases under the same conditions at the 60 l/h mark (approximate values): Sulfur dioxide $SO_2 = 49 l/h$ Hydrogen H₂ = 159 l/h

Juliul uloxide	502	+51/11	nyurugen	112	133 1/11
Carbon dioxide	CO2	55 l/h	Helium	He	77 l/h
Carbon monoxide	со	60 l/h	Argon	Ar	49 l/h
Oxygen	O ₂	54 l/h	Air		59 l/h
Methane	CH₄	86 l/h			

Measuring deviation

 ± 5 % of the full-scale value

Gas inlet conditions

Pressure max. 10 MPa (10 bar), temperature 100 °C

Flow rate adjustment

With integral needle valve

Mounting

Panel or wall mounting by means of mounting bracket

Gas connections

1/4 NPT female thread or sleeve for hose 4 mm inner diameter

Scope of delivery

Flow meter, mounting bracket, 2 nozzles

Flow monitor 1.6 to 16 l/h, 7 to 70 l/h

Measuring range 1.6 to 16 l/h or 7 to 70 l/h nitrogen at 20 °C and 1013 hPa (mbar)

Measuring deviation ±5 % of the full-scale value

Flow rate adjustment With integral needle valve

Materials of gas-conducting parts As with flow meter 7 to 70 l/h

Weight Approx. 0.8 kg

Mounting Panel or wall mounting by means of mounting bracket

Gas connections ¹/₄ NPT female thread or sleeve for hose 4 mm inner diameter

Signaling With inductive contact RC 10-14-NO Float catcher set to 5 l/h or 20 l/h

Electrical connections Terminal boxes with EMC filter and cable gland M16

Scope of delivery Flow monitor, mounting bracket, 2 nozzles, O-ring

Flow monitor for chlorine 7 to 70 l/h

Measuring range

7 to 70 l/h chlorine at 20 °C and 1013 hPa (mbar)

Measuring deviation ±5 % of the full-scale value

Gas inlet conditions

Pressure max. 4 MPa (4 bar), temperature 100 °C

Flow rate adjustment With integral needle valve PEEK

Materials of gas-conducting parts

Measuring tube	Borosilicate glass
Float	PEEK with lining
Float catcher	PTFE, set to 20 l/h
Case	PVDF
Seals	FFKM

Weight Approx. 0.5 kg

Mounting

Panel or wall mounting by means of mounting bracket

Gas connections ¹/₄ NPT female thread

Signaling

With inductive contact RC 10-14-NO Float catcher set to 20 l/h

Electrical connections

Terminal boxes with EMC filter and cable gland M16

Scope of delivery

Flow monitor, mounting bracket, 2 nozzles, O-ring

ER-144A/Ex Switching unit

Application and description

The switching unit ER-144A/Ex acts as switching amplifier for the condensate monitor CGKW (see page 32). The intrinsicallysafe circuit of the switching unit ER-144A/Ex enables the condensate monitor also to be installed in hazardous areas.

The ER-144A/Ex switching unit operates in closed-circuit operation. The alarm positions of the output contacts correspond to those of the device in a non-voltage state or exceeding the adjustable measurement current value (electric conductance) or disconnection of the sensor lead. In the 'Ready' status, the output contacts have changed over to the corresponding counterposition (internal relay picked-up).

A 100-k Ω resistor (1 %/0.25 W) must be installed at the sensor in order to monitor the signal line between the sensor and the electrode relay. Without the resistor, the switching unit will change to the 'Line break' position.

Technical data

Input	'ia'	ʻib'
No-load voltage U0	≤ 13.1 V	≤ 13.1 V
Short-circuit current I ₀	≤ 5 mA	≤ 5 mA
Power P ₀	≤ 65 mW	≤ 65 mW
Permissible external capacitance C ₀	≤ 0.97 μF	≤6μF
Permissible external inductance L ₀	≤ 0.9 H	≤1H

Output

2 potential-free changeover contacts, max. 250 V AC, 5 A

Indication

One LED each for line breakage and condensate penetration

Construction

Surface-mounting case

Degree of protection

Housing IP40, terminals IP20 to EN 60529

Safety

Protection class II, over-voltage category III, degree of pollution 2

Weight

Approx. 0.2 kg

Mounting

Snap fastening on standard rail 35 mm (EN 50022)

Ambient temperature -25 to +60 °C

Power supply 230 V AC or 115 V AC ±10 %, 48 to 62 Hz, ≤ 1 VA

EC type examination certificate

TÜV 00 ATEX 1604

Designation

Installation location Outside the hazardous area

Cylinder pressure reducers

Application and description

Cylinder pressure reducers are used to reduce the filling pressure in pure gas and test gas cylinders to the required operating pressure. Material compatibility must be observed in respect of the test gas (see technical data). Two-stage cylinder pressure reducers are employed where very constant pressure and flow are required at low operating pressure – for example where the subsequent gas paths are switched over using solenoid valves. Pressure reducers with minimum contact at the high-pressure gauge give an indication when the cylinder pressure has dropped to such a level that it is necessary to replace the gas cylinder.
