

Temposonics®

Magnetostrictive Linear Position Sensors

$R ext{-Series }V$ RP5 Analog

Data Sheet

- Direct analog output, position + speed
- Dual magnet position measurement
- Field adjustments and diagnostics using the new TempoLink smart assistant

MEASURING TECHNOLOGY

The absolute, linear position sensors provided by MTS Sensors rely on the company's proprietary Temposonics® magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics® position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the end of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

Position magnet (magnetic field) Sensing element (waveguide) Torsional strain pulse converter Measurement cycle 1 Current pulse generates magnetic field 2 Interaction with position magnet field generates torsional strain pulse 3 Torsional strain pulse propagates 4 Strain pulse detected by converter 5 Time-of-flight converted into position

Fig. 1: Time-of-flight based magnetostrictive position sensing principle

R-SERIES V Analog

Temposonics® R-Series V brings very powerful sensor performance to meet the many demands of your application. The R-Series V is the long term solution for harsh environments that have high levels of shock and vibration. Sensor models with analog outputs (voltage/current) have options for one or two position magnets, and for single or dual output channels.

When the R-Series V Analog sensor is ordered with a single output channel for one position magnet, the output will be the measured position value presented in either voltage or current.

When the sensor is ordered with dual output channels the second output can be configured to report the position of the second magnet or the reverse position or velocity of one magnet or the temperature inside of the electronics housing. Other configurations can be adjusted using the TempoLink smart assistant.

With many outstanding features the R-Series $\mathbf V$ sensors are fit for a very broad range of applications.

TempoLink YOUR SMART ASSISTANT

The TempoLink smart assistant is an accessory for the R-Series V family of sensors that supports setup and diagnostics. For the R-Series V Analog model, it enables the adjustment of parameters like the output values for the zero and span setpoints and their locations on the sensor. For diagnostics and analysis of operational data the R-Series V sensors continuously track values such as total distance traveled by the position magnet, internal temperature of the sensor and the quality of the position signal. This additional information can be read out via TempoLink smart assistant even while the sensor remains operational in the application.

TempoLink smart assistant is connected to the sensor via the power connection, which now adds bidirectional communication for setup and diagnostics. The TempoLink smart assistant is operated using a graphical user-interface that will be displayed on your smartphone, tablet, laptop or PC. Just connect your Wi-Fi-enabled device to TempoLink Wi-Fi access point and go to the website URL for the user-interface.

TempoLink kit for Temposonics® R-Series V
Part no. TL-1-0-AD60 (for D60)
Part no. TL-1-0-AS00 (for cable output)

Hand programmer for analog output Part no. 253 124

Material: Zinc nickel plated Termination: Solder Cable Ø: 6...8 mm (0.24...0.31 in.) Operating temperature: -40...+100 °C (-40...+212 °F) Ingress protection: IP65/IP67 (correctly fitted) Fastening torque: 0.6 Nm Material: Zinc nickel plated
Termination: Solder
Cable Ø: 6...8 mm (0.24...0.31 in.)
Wire: 0.75 mm² (20 AWG)
Operating temperature:
-40...+95 °C (-40...+203 °F)
Ingress protection: IP67 (correctly fitted)
Fastening torque: 0.6 Nm

 Connect wirelessly via Wi-Fi enabled device or via USB with the diagnostic tool

• Simple connectivity to the sensor via 24 VDC power line (permissible cable length: 30 m)

• User friendly interface for mobile devices and desktop computers

 See data sheet "TempoLink smart assistant" (document part no.: 552070) for further information Easy teach-in-setups of stroke length and direction on desired zero/span positions. For sensors with 1 magnet.

Programming tool

Cables

Cabinet programmer for analog output Part no. 253 408

Features snap-in mounting on standard DIN rail (35 mm). This programmer can be permanently mounted in a control cabinet and includes a program/run switch. For sensors with 1 magnet.

PVC cable Part no. 530 032

Material: PVC jacket; gray Features: Twisted pair, shielded, flexible Cable Ø: 6 mm (0.23 in.) Cross section: $3 \times 2 \times 0.14$ mm² Bending radius: $10 \times D$ (fixed installation) Operating temperature: -40...+105 °C (-40...+221 °F)

PUR cable Part no. 530 052

Material: PUR jacket; orange Features: Twisted pair, shielded, highly flexible, halogen free, suitable for drag chains, mostly oil & flame resistant Cable Ø: 6.4 mm (0.25 in.) Cross section: $3 \times 2 \times 0.25$ mm² Bending radius: $5 \times D$ (fixed installation) Operating temperature: -30...+80 °C (-22...+176 °F)

Teflon® cable Part no. 530 112

Material: Teflon® jacket; black Features: Twisted pair, shielded, flexible, high thermal resistance, mostly oil & acid resistant Cable Ø: 7.6 mm (0.3 in.) Cross section: $4 \times 2 \times 0.25$ mm² Bending radius: $8-10 \times D$ (fixed installation) Operating temperature: -100...+180 °C (-148...+356 °F)

Controlling design dimensions are in millimeters and measurements in () are in inches

^{*/} Follow the manufacturer's mounting instructions

Extension cables

PVC cable with M16 female connector (6 pin), straight - pigtail

PVC cable (part no. 530 032) with M16 female connector, straight (part no. 370 423)

Order code:

MTS-A-370423-xxxx-530032-0

(where xxxx is the cable length in centimeters (e.g. code: 0150))

PUR cable with M16 female connector (6 pin), straight - pigtail

g System

1 Standard

h Output

- A Current
- V Voltage

i Function

- 1 Position (1 or 2 magnets/outputs)
- 2 Position and speed (1 magnet and 2 outputs)
- 3 Position and velocity (1 magnet and 2 outputs)
- 4 Position and reverse position (1 magnet and 2 outputs)
- Position and temperature inside the sensor electronics housing (1 magnet and 2 outputs)
- 6 Differential (2 magnets and 1 output)

i Options

- **0** Standard
- 3 Over range output mode

k Output range

- 0 0...10 VDC or 4...20 mA
- **1** 10...0 VDC or 20...4 mA
- 2 -10...+10 VDC or 0...20 mA
- **3** +10...-10 VDC or 20...0 mA
- **V** 0...10 VDC for position, -10...+10 VDC for velocity

I Max speed or velocity value

(optional: use when i "Function" is 2 or 3)

For metric stroke lengths encode speed or velocity in m/s for the values 0.01 to 9.99 m/s (001...999)

For US customary stroke lengths encode speed or velocity in inches/s for the values 1 to 400 in./s (001...400)

Use the codes (00E) for 0.025 m/s, and (A00) for 10.0 m/s to provide backwards compatibility for these predecessor models of the R-Series.

NOTICE

- For RP5, the magnet selected in b "Design" is included in the scope of delivery. Specify the number of magnets for your application. For multi-position measurements with more than 1 magnet order the other magnets separately.
- The number of magnets is limited by the stroke length.
 The minimum allowed distance between magnets (i.e. front face of one to the front face of the next one) is 75 mm (3 in.).
- Use magnets of the same type for multi-position measurement,
 e.g. 2 × U-magnet (part no. 251416-2).

DELIVERY

- Sensor
- Accessories have to be ordered separately.
- Position magnet (not valid for RP5 with design »O«)
 2 mounting clamps
- 2 mounting clamps up to 1250 mm (50 in.) stroke length
 - + 1 mounting clamp for each 500 mm (20 in.) additional stroke length

GLOSSARY

Α

Analog output

For a sensor with analog output, the measured value is output as an analog voltage signal or current signal.

n

Differential

For differential measurement, the distance between the two position magnets is output as a value.

M

Max speed or velocity value

For speed or velocity, the output value generated is scaled based on the maximum speed or velocity value indicated in the order code.

Measuring direction

- Forward: Values increasing from sensor electronics housing to rod end/profile end
- Reverse: Values decreasing from sensor electronics housing to rod end/profile end

Multi-position measurement

During the measurement cycle, the positions of every magnet on the sensor are simultaneously reported. The velocity or speed are continuously calculated based on these changing position values as the magnets are moved.

0

Over range output mode

When enabled this mode allows the position output values to continue to increase or decrease when the magnet travels beyond the active stroke range.

R

Resolution

The sensor precisely measures time to provide the position measurement. For the analog output the measured time value is converted into an analog voltage signal or current signal using a high-performance **D**igital to **A**nalog **C**onverter (DAC) having 16 bits of resolution.

S

Speed

The output value for speed indicates how fast the position magnet is being moved, independent of the measuring direction. (\rightarrow Velocity)

T

Temperature inside the sensor electronics housing

The temperature inside the sensor electronics housing is reported as an analog voltage signal or current signal. For each output range, the 0 % output value has the factory default setpoint at -40 °C, and the 100 % output value has the default setpoint at +100 °C. Note: a dedicated temperature chip is used for the output signal and its values may vary from those reported on the TempoLink application screen.

V

Velocity

The output value for velocity indicates how fast the position magnet is being moved, and in which direction. (\rightarrow Speed)
